

Jeremy Brown

Full Stack Python Developer | Web Apps, Dashboards, and Automation

Email: JeremyB.pydev@gmail.com | **GitHub:** github.com/JeremyB-py

Portfolio: www.jeremyb.dev

Location: St. Louis, MO (Open to remote)

Summary

Full stack Python developer building web apps, mobile tools, and automation. Strong with FastAPI services, Streamlit admin UIs, React Native (Expo), and modular monorepos that share business logic across apps. Comfortable using modern tooling (including AI-assisted workflows) to iterate quickly while maintaining clear ownership and code quality. Background includes 10 years in logistics, providing strong foundations in reliability and structured problem solving. I am constantly learning by shipping production-style projects.

Technical Skills

Languages & Frameworks: Python, FastAPI, Streamlit, React Native, Expo, HTML, CSS, JavaScript

Backend & Data: PostgreSQL, SQL, Pydantic, REST APIs

Tools & Platform: Git, GitHub Actions (CI), Railway, Cloudflare Pages, Docker, VS Code, Ubuntu

Specialties: Full Stack App Development, Dashboards, Modular Architecture, Admin Tooling, Automation

Projects

Wrinkle Witch Platform (Website, API, Booking, CRM, Scheduled Jobs, and Admin Tools)

- *Python, FastAPI, Streamlit, HTML/CSS/JS, SQLAlchemy, Railway/Cloudflare*

- Built full-stack platform for a local esthetician: static site (Cloudflare Pages), FastAPI backend (Railway), Streamlit admin apps with in-app job dashboard for Railway cron jobs (credit expiration, appointment sync).
- Implemented referral activation, unsubscribe, specials/packages, and Square Bookings (multi-step flow with Web Payments SDK card tokenization); shared monorepo modules for auth (bcrypt + roles), Square OAuth, and domain-aware staging/production URLs.

Likely Cause - *Python, FastAPI, React Native, Expo, PostgreSQL, Docker*

- Built a mobile-first incident triage app that combines custom /health monitors with third-party status feeds to surface a rule-based "likely cause" and suggested next checks.
- Shipped scheduled worker checks, Expo push alerts, provider adapters, native Android/iOS home-screen widgets, and a monorepo with Docker Compose local dev.

ClipSpan - *Python, FastAPI, Kotlin, Android, Rust, SQLite*

- Cross-device clipboard history and sync between Android and Linux: companion app, FlorisBoard-based keyboard with toolbar send/paste, and a Linux daemon with QR pairing and offline-resilient Room history.
- Designed a modular sync protocol with explicit user-controlled send/paste before automatic sync.

Zap - Open Source Contribution - *Rust*

- Merged 3 PRs to zerx-lab/zap: BYOP agent tool execution from JSON-in-text, provider routing fixes (OpenAI Responses API, Ollama/Anthropic URL normalization), and Linux Settings paste UX (#305-#307).

Experience

Full Stack Developer, Freelance | 2025-Present

- Design and develop full-stack applications with web UIs, backend services, and automation.
- Built the Wrinkle Witch platform combining website, API, CRM, and admin tooling into a cohesive system.
- Built mobile and full-stack side projects and contributed fixes to the open-source Zap terminal.

City Letter Carrier, United States Postal Service (USPS) | 2016-2026

- Managed high volume delivery routes with accuracy, consistency, and independent problem solving.

Education

St. Louis Community College (coursework), 2013–2014 • High School Diploma, 2013
