

Jeremy Brown

Full Stack Python Developer | Web Apps, Dashboards, and Automation

Email: JeremyB.pydev@gmail.com | **GitHub:** github.com/JeremyB-py

Portfolio: www.jeremyb.dev

Location: St. Louis, MO (Open to remote)

Summary

Full stack Python developer building web apps, mobile tools, and automation. Strong with FastAPI services, Streamlit admin UIs, and modular monorepos that share business logic across apps. Comfortable using AI-assisted workflows to debug, iterate, and ship while owning integration, testing, and what goes to production. Background includes 10 years in logistics, providing strong foundations in reliability and structured problem solving. I am constantly learning by shipping production-style projects.

Technical Skills

Languages & Frameworks: Python, FastAPI, Streamlit, HTML, CSS, JavaScript

Backend & Data: PostgreSQL, SQL, Pydantic, REST APIs

Tools & Platform: Git, GitHub Actions (CI), Railway, Cloudflare Pages, Docker, VS Code, Ubuntu

Specialties: Full Stack App Development, API Design, Modular Architecture, Admin Tooling, Automation

Projects

Wrinkle Witch Platform (Website, API, Booking, CRM, Scheduled Jobs, and Admin Tools)

- Built full-stack platform for a local esthetician: static site (Cloudflare Pages), FastAPI backend (Railway), Streamlit admin apps, and Railway cron jobs (credit expiration, appointment sync) with an in-app dashboard.
- Implemented referral activation, unsubscribe, specials/packages, and Square Bookings (multi-step flow with Web Payments SDK card tokenization); shared monorepo modules for auth (bcrypt + roles), Square OAuth, and domain-aware staging/production URLs.

ClipSpan (Cross-Platform Clipboard Sync and History)

- Cross-device clipboard history and sync for Android, Linux, and Windows: FlorisBoard-based keyboard, Rust/Tauri desktop client with docked history picker, QR pairing, image/blob sync, and local history.
- Designed a modular sync protocol with explicit Send Clip / Paste first; added opt-in auto-sync policy and optional end-to-end encrypted account + relay for off-LAN delivery.

Likely Cause (Dependency Health Dashboard)

- Built a mobile-first incident triage app: FastAPI backend, PostgreSQL, background worker, and an Expo-based mobile client that combines custom /health monitors with third-party status feeds for rule-based "likely cause" labels and suggested next checks.

Zap (Open Source Contribution)

- Merged 3 PRs to zerx-lab/zap: BYOP agent tool execution from JSON-in-text, provider routing fixes (OpenAI Responses API, Ollama/Anthropic URL normalization), and Linux Settings paste UX (#305-#307).

Experience

Full Stack Developer, Freelance | 2025-Present

- Design and develop full-stack applications: Python APIs, admin UIs, static sites, and automation.
- Built the Wrinkle Witch platform combining website, API, CRM, and admin tooling into a cohesive system.
- Built mobile and full-stack side projects and contributed fixes to the open-source Zap terminal.

City Letter Carrier, United States Postal Service (USPS) | 2016-2026

- Managed high volume delivery routes with accuracy, consistency, and independent problem solving.

Education

St. Louis Community College (coursework), 2013–2014 • **High School Diploma**, 2013
